Paper 2 Written Paper

**October/November 2020**

**MARK SCHEME**

Maximum Mark: 75

---

<p><b>Published</b></p>
-------------------------

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2020 series for most Cambridge IGCSE™, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

---

This document consists of **24** printed pages.

**Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

**GENERIC MARKING PRINCIPLE 1:**

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

**GENERIC MARKING PRINCIPLE 2:**

Marks awarded are always **whole marks** (not half marks, or other fractions).

**GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

**GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

**GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks														
1(a)	One mark for both answers: <ul style="list-style-type: none"><li>• Process</li><li>• Output</li></ul> Order not important.	1														
1(b)	One mark per bullet point (or equivalent)  They all represent: <ul style="list-style-type: none"><li>• A solution to a problem / a way to perform a task</li><li>• Expressed as a sequence / series of steps / stages / instructions</li></ul>	2														
1(c)	1 mark per row to max 4 marks  Example answers: <table><tr><th>Data type</th><th>Example data value</th></tr><tr><td>BOOLEAN</td><td>FALSE</td></tr><tr><td>STRING</td><td>"Happy"</td></tr><tr><td>INTEGER</td><td>18</td></tr><tr><td>REAL</td><td>31234.56</td></tr><tr><td>CHAR</td><td>'H'</td></tr><tr><td>DATE</td><td>10/01/2019</td></tr></table>  Each row must be a different data type together with an appropriate value	Data type	Example data value	BOOLEAN	FALSE	STRING	"Happy"	INTEGER	18	REAL	31234.56	CHAR	'H'	DATE	10/01/2019	4
Data type	Example data value															
BOOLEAN	FALSE															
STRING	"Happy"															
INTEGER	18															
REAL	31234.56															
CHAR	'H'															
DATE	10/01/2019															

Question	Answer	Marks										
1(d)	<p>Max 3 marks, one mark for each correct line</p> <table><thead><tr><th>Term</th><th>Description</th></tr></thead><tbody><tr><td>Black-box testing</td><td>A structure for the temporary storage of data</td></tr><tr><td>File</td><td>A method used when the structure of the program is unknown</td></tr><tr><td>Assignment</td><td>A method of setting the value of a variable</td></tr><tr><td>Array</td><td>A structure for the permanent storage of data</td></tr></tbody></table> <pre>graph LR; BT[Black-box testing] --&gt; M3[\"A method used when the structure of the program is unknown\"]; F[File] --&gt; P2[\"A structure for the permanent storage of data\"]; A[Assignment] --&gt; M1[\"A method of setting the value of a variable\"]; AR[Array] --&gt; T1[\"A structure for the temporary storage of data\"]</pre>	Term	Description	Black-box testing	A structure for the temporary storage of data	File	A method used when the structure of the program is unknown	Assignment	A method of setting the value of a variable	Array	A structure for the permanent storage of data	3
Term	Description											
Black-box testing	A structure for the temporary storage of data											
File	A method used when the structure of the program is unknown											
Assignment	A method of setting the value of a variable											
Array	A structure for the permanent storage of data											

Question	Answer	Marks
1(e)	1 mark for two rows correct, 2 marks for all rows correct.	2

Question	Answer	Marks
2(a)	<pre> DECLARE A, B, C : INTEGER DECLARE Average : REAL  INPUT A REPEAT   INPUT B UNTIL B &lt;&gt; A  REPEAT   INPUT C UNTIL C &lt;&gt; A AND C &lt;&gt; B  Average ← (A + B + C) / 3 OUTPUT Average  IF A &gt; B AND A &gt; C   THEN     OUTPUT A   ELSE     IF B &gt; A AND B &gt; C       THEN         OUTPUT B       ELSE         OUTPUT C     ENDIF   ENDIF ENDIF </pre> <p>Mark as follows:</p> <ol style="list-style-type: none"> <li>1 Declaration of <b>all</b> variables used (at least A, B and C)</li> <li>2 Uniqueness test on A, B and C</li> <li>3 Loop(s) to repeat until three unique values have been entered</li> <li>4 Calculation of average value</li> <li>5 Determine the largest value</li> <li>6 Output of average value <b>and</b> largest value</li> </ol>	6

Question	Answer	Marks												
2(b)	<div>One mark per correct row (Completed parts shown in bold)</div> <table><tr><th>Expression</th><th>Evaluates to</th></tr><tr><td>"ALARM: " &amp; <b>RIGHT</b>("Time: 1202", <b>4</b>)</td><td>"ALARM: 1202"</td></tr><tr><td><b>MID</b>("Stepwise.", <b>5</b>, <b>4</b>)</td><td>"wise"</td></tr><tr><td>1.5 * <b>LENGTH</b>("OnePointFive")</td><td>18</td></tr><tr><td><b>NUM_TO_STRING</b>(27.5)</td><td>"27.5"</td></tr><tr><td><b>DIV</b>(9, 4)</td><td>2</td></tr></table>	Expression	Evaluates to	"ALARM: " & <b>RIGHT</b> ("Time: 1202", <b>4</b> )	"ALARM: 1202"	<b>MID</b> ("Stepwise.", <b>5</b> , <b>4</b> )	"wise"	1.5 * <b>LENGTH</b> ("OnePointFive")	18	<b>NUM_TO_STRING</b> (27.5)	"27.5"	<b>DIV</b> (9, 4)	2	5
Expression	Evaluates to													
"ALARM: " & <b>RIGHT</b> ("Time: 1202", <b>4</b> )	"ALARM: 1202"													
<b>MID</b> ("Stepwise.", <b>5</b> , <b>4</b> )	"wise"													
1.5 * <b>LENGTH</b> ("OnePointFive")	18													
<b>NUM_TO_STRING</b> (27.5)	"27.5"													
<b>DIV</b> (9, 4)	2													
2(c)	<div>One mark per point, example points:</div> <div>1 Subtasks make the solution more manageable // make the algorithm easier to follow</div> <div>2 A subtask makes the problem easier to solve / design / program than the whole task</div> <div>3 A subtask is useful when a part of the algorithm is repeated</div>	3												

Question	Answer	Marks
3(a)	<p>'Pseudocode' solution included here for development and clarification of mark scheme. Programming language example solutions appear in the Appendix.</p> <pre> FUNCTION CheckSkid() RETURNS BOOLEAN   DECLARE Rot : ARRAY[1:4] OF INTEGER   DECLARE Average : REAL   DECLARE ThisRot : INTEGER   DECLARE Danger : BOOLEAN    FOR Index ← 1 TO 4     REPEAT       OUTPUT "Input Rotation speed for wheel ", Index       INPUT ThisRot       UNTIL ThisRot &gt;= 0 AND ThisRot &lt;= 1000       Rot[Index] ← ThisRot     ENDFOR      Average ← (Rot[1] + Rot[2] + Rot[3] + Rot[4]) / 4      Danger ← FALSE     FOR Index ← 1 TO 4       IF Rot[Index] &gt; (Average * 1.1) OR Rot[Index] &lt; (Average * 0.9)         THEN           Danger ← TRUE         ENDIF       ENDFOR        IF Danger = TRUE         THEN           OUTPUT "Skid Danger"         ENDIF        RETURN Danger      ENDFUNCTION </pre>	8

Question	Answer	Marks																								
3(a)	<p>1 mark for each of the following:</p> <ul style="list-style-type: none"><li>1 Function heading and ending</li><li>2 Declare local integers for 4 rotation values and a real for the average / tolerance</li><li>3 Prompt and input four rotation values</li><li>4 Validate each input value <b>in a loop</b></li><li>5 Calculate average rotation <b>AND</b> calculate acceptable max and min (or single tolerance, or alternative method)</li><li>6 Compare rotational value of each wheel</li><li>7 Test if rotational value of (each) wheel is within the acceptable range</li><li>8 Output a warning message <b>and</b> return the correct value in all cases</li></ul>
